

Scientific Submarine Cable Network

Technical White Paper

June 2003

**Technical Committee on Globe
Monitoring Cable Network**

**IEEE Oceanic Engineering Society
Japan Chapter**

Contents

1. Preface
 - 1.1 Introduction
 - 1.2 Present state of scientific submarine cables in Japan
 - 1.3 Achievements made in seismological field to date
 - 1.4 Advantages of networking
 - 1.5 Expected application areas

2. A Network Overview
 - 2.1 Introduction
 - 2.2 Configuration of cable network
 - 2.3 Technical requirements
 - 2.4 Modeling of cable network
 - 2.5 Power consumption, data bit rate and synchronization accuracy
 - 2.6 Technical terms

3. Power Supply System
 - 3.1 Introduction
 - 3.2 Technical requirements for power supply system
 - 3.3 AC power supply scheme
 - 3.3.1 AC power supply using communications optical submarine cable
 - 3.3.2 AC power supply using stranded-wire submarine power cable
 - 3.4 Constant voltage power supply scheme
 - 3.5 Constant voltage/constant current hybrid power supply scheme
 - 3.6 Constant current/constant current power supply scheme
 - 3.7 Summary

4. Signal Transmission System
 - 4.1 Introduction
 - 4.2 Technical requirements for signal transmission system
 - 4.3 HDTV signal transmission
 - 4.3.1 Cameras
 - 4.3.2 HDTV signal transmission scheme
 - 4.4 Time synchronization
 - 4.5 Optical signal transmission system
 - 4.5.1 Network design
 - 4.5.2 Backbone-layer communications scheme

- 4.5.3 Science-layer communications scheme
- 4.6 Communications protocols
 - 4.6.1 Communications protocols
 - 4.6.2 Data formats
- 4.7 Sensor interface
- 4.8 Data utilization, processing and disclosure
 - 4.8.1 Data processing
 - 4.8.2 Data disclosure
- 4.9 System operation and management
 - 4.9.1 Overview of land-based system
 - 4.9.2 Requirements for land-based system
 - 4.9.3 Configuration of land-based system
 - 4.9.4 Monitoring
- 5. Underwater System
 - 5.1 Introduction
 - 5.2 Technical requirements for undersea system
 - 5.3 Configuration of observation node
 - 5.4 Components of undersea system and reliability
 - 5.4.1 Underwater mateable connectors
 - 5.4.2 O-rings
 - 5.4.3 Other equipment
 - 5.5 Construction methods
 - 5.5.1 Proposed NBU (undersea three-way) installation method
 - 5.5.2 Proposed PBU (undersea four-way) installation method
 - 5.6 Repair methods
 - 5.6.1 Proposed NBU (undersea three-way) repair methods
 - 5.6.2 Proposed PBU (undersea four-way) repair methods
 - 5.7 Maintenance and management
 - 5.7.1 Concept of undersea construction/maintenance operations support system
 - 5.7.2 Testing equipment
